

Generated Mock Menus

Five fictional “what-if” weeks — August in Montreal

Produced by the menus-recommend skill · not real chef menus

- 1 · Warm sunny week
- 2 · Heatwave week
- 3 · Late-summer back-to-school week
- 4 · Stormy mixed week
- 5 · Cool rainy late-August week

Week of Mock — warm sunny August week (Montreal)

MOCK / GENERATED — a fictional "what-if" week produced by the `menus-recommend` skill from `PATTERNS.md` + the Parsley repertoire. Not a real chef menu. Mock dates 3–7 August; all values invented except the given scenario.

Weekly production

Végé (5) — Vegan poutine (medium) · Ratatouille · Veggie paella · Gluten-free vegetable lasagna · Mushroom risotto **Poisson (3)** — Salmon pesto artichoke · Sesame-ginger salmon · Mediterranean-style haddock **Texture (2)** — Veggie jerk chicken with orange remoulade · Veggie chicken satay with almonds **Soupe (5)** — Korean soup · Green tom yum soup · Mole verde soup · Vegan pho soup · Chipotle lentil vegetable soup **Potage (4)** — Cream of tomato soup · Cold melonccio soup · Parsnip pear pecan soup · Rutabaga apple maple soup **Sandwichs (2)** — Hummus, apple and brie sandwich · Blackened haddock sandwich **Wraps (1)** — Tuna salad wrap **Salades (6)** — Kale mango cabbage salad · Creamy broccoli salad · Asian cabbage salad · Orange fennel salad · Cabbage pepper salad with mint · Carrot celeriac and almond salad **Salade-comp (3)** — Bandhu salad · Chickpea crumble salad · Cassava tabbouleh salad **Sauces (1)** — Vegan tarragon mushroom sauce **Hummus (2)** — Dill hummus · Broccoli and pistachio hummus **Quiche (1)** — Ham and vegetable quiche **Burgers (1)** — Veggie beef burger **Pico de gallo (1)** — Pico de gallo

Weekly schedule

Day	Temp	Weather	Dishes
Mon 3 Aug	25 °C	sunny	Vegan poutine · Ratatouille · Salmon pesto artichoke · Ham & vegetable quiche · Korean soup · Cream of tomato soup · Kale mango cabbage salad · Creamy broccoli salad · Dill hummus · Vegan tarragon mushroom sauce
Tue 4 Aug	26 °C	sunny	Vegan poutine · Ratatouille · Veggie jerk chicken w/ orange remoulade · Sesame-ginger salmon · Green tom yum soup · Cream of tomato soup · Asian cabbage salad · Orange fennel salad · Bandhu salad · Broccoli & pistachio hummus · Veggie beef burger
Wed 5 Aug	27 °C	sunny, humid	Vegan poutine · Veggie paella · Salmon pesto artichoke · Ham & vegetable quiche · Korean soup · Mole verde soup · Cream of tomato soup · Cabbage pepper salad w/ mint · Creamy broccoli salad · Cassava tabbouleh salad · Dill hummus · Tuna salad wrap · Hummus/apple/brie sandwich
Thu 6 Aug	28 °C	hot & sunny	Vegan poutine · Mushroom risotto · Mediterranean-style haddock · Veggie chicken satay w/ almonds · Cold melonccio soup · Vegan pho soup · Asian cabbage salad · Carrot celeriac & almond salad · Chickpea crumble salad · Broccoli & pistachio hummus · Pico de gallo · Vegan tarragon mushroom sauce
Fri 7 Aug	24 °C	partly cloudy	Vegan poutine · Gluten-free vegetable lasagna · Sesame-ginger salmon · Chipotle lentil vegetable soup · Parsnip pear pecan soup · Rutabaga apple maple soup · Orange fennel salad · Carrot celeriac & almond salad · Blackened haddock sandwich

Comments and weather

Mock warm-sunny typical-August week in Montreal. All five service days sit at 24–28 °C — a hot, salad-lean week with light mains, one cold soup on the peak day, and a burger and Pico de Gallo carried as warm-

season items. Generated artifact, not a real chef menu.

Why this menu

Strategy

The only given was "*August in Montreal, Canada — use typical weather*"; everything else (per-day temps, the sunny/humid mix, mock dates) is invented for a classic early-August warm week — every day 24–28 °C, sunny to partly cloudy. Montreal August is the hottest, most humid stretch of the year, so the whole week is pulled toward the **hot-weather** → **lighter-menu** pattern (*weather_temp, chef-stated, high*): a wide salad wall (6 salads + 3 composed), fresh brothy soups over heavy ragoûts, lean fish, and the warm-season extras the chef only runs when it's hot — a **burger** and **Pico de Gallo**. Heavy root-vegetable potages and casseroles are kept to the coolest day. The staple spine (Ham/quiche, Poutine, Kale mango cabbage, Salmon pesto artichoke, Korean, Creamy broccoli) anchors every week and is all present.

Per-day notes

- **Mon 25 °C sunny** — Opens with **Kale mango cabbage** (chef places KM on Monday) plus Creamy broccoli; Ham & vegetable quiche and Poutine anchor the staples; Korean soup + Cream of tomato potage cover the soup requirement; Salmon pesto artichoke is the fish. No texture main today — it is deliberately spaced to Tue/Thu.
- **Tue 26 °C sunny** — First **texture** main (Veggie jerk chicken); Green tom yum brings a light, spicy brothy soup for the heat; the **Veggie beef burger** runs as a warm-season add. Two cold salads + Bandhu composed salad keep it salad-forward.
- **Wed 27 °C sunny/humid** — Busiest mid-week slate; Veggie paella as the véggie main, a fresh Mole verde soup, tuna wrap + hummus-apple-brie sandwich for grab-and-go in the heat. No 3rd texture main — demand isn't high enough to trigger the Wednesday texture exception.
- **Thu 28 °C hot & sunny** — Peak heat: the **Cold melonccio soup** appears here (its only outing this week), and **Pico de Gallo** is served (chef rule: Thursday, never Monday). Second **texture** main (Veggie chicken satay). Lightest, freshest day of the week.
- **Fri 24 °C partly cloudy** — Coolest day, so the two heartier **root-vegetable potages** (Parsnip-pear-pecan, Rutabaga-apple-maple) and the GF vegetable lasagna are parked here, alongside a chipotle-lentil soup. No texture main (Tue/Thu spacing).

Pattern citations (with confidence)

- **Menu skeleton counts** — salades 6, soupe 5, poisson 3, salade-comp 3, hummus 2, texture 2, sandwiches 2, sauces 1, quiche 1, wraps 1, burgers 1 all match the `menu_skeleton` medians. (*high; inferred*) Potage set to **4** (see honesty flags). Végé shows 5 because Poutine has no dedicated pool category and is parked in végé (still within végé min 3 / max 8).
- **Staples anchored** — Ham (quiche), Poutine, Kale mango cabbage, Salmon pesto artichoke, Korean (soup), Creamy broccoli all present. (*rotation, high; Ham/Poutine 47/47*)
- **Kale mango cabbage** → **Monday**. (*per_day_balance, chef-stated, high*)
- **Pico de Gallo** → **Thursday, never Monday** — placed Thursday only. (*per_day_balance, chef-stated, high*) Also honored as a **warm-season** dish appropriate in August. (*calendar, medium*)
- **Texture mains** → **Tuesday and Thursday, spaced**, no 3rd on Wednesday (demand not high). (*per_day_balance, chef-stated, high*)

- **Every service day fields ≥ 1 soup, ≥ 1 salad, ≥ 1 fish** — verified across all five days. (*per_day_balance, high; inferred*) Plant-substitute main present Tue/Thu (texture) and a vegan poutine daily; not forced onto all five days, matching the "spaced, not daily" read. (*medium; inferred*)
- **Hot weather → lighter, salad-lean menu**, burgers/falafels + Pico cluster in warm weeks. (*weather_temp, chef-stated, high*)
- **Cold-served cold soup only on days ≥ 24 °C, Mélonccio $\leq$ once/week in hottest summer** — Cold melonccio soup placed on the single hottest day (Thu 28 °C). (*weather_temp, chef-stated, high*)

Improvisation & honesty flags

- **Potage count is 4, not the median 5.** The Parsley repertoire contains only four clearly blended "potage" recipes (cream-of-tomato, cold-melonccio, parsnip-pear-pecan, rutabaga-apple-maple); I did not invent a fifth or reclassify a chunky soupe to hit the median. 4 is within the skeleton min (4). *Improvisation: under-count driven by repertoire limits.*
- **Root-vegetable potages on a warm week.** Parsnip-pear-pecan and Rutabaga-apple-maple are cool-weather dishes; the repertoire lacks light *summer* potages (e.g. a chilled green potage), so I parked both on the coolest day (Fri 24 °C) rather than drop the category. *Improvisation against the hot-week lean.*
- **All dish tags are `inferred`** from name + repertoire knowledge, not read from tagged recipe files. Protein/temperature/cuisine/spice values (e.g. Korean soup as plant-substitute, Cold melonccio as a cold mediterranean soup, Poutine as `quebécois`) carry inference error. `PATTERNS.md`'s own small-sample caveat applies — nearly all corpus dish tags are inferred too.
- **Poutine has no dedicated pool category** and is parked under végété; this is a modelling choice, not a chef-stated placement.
- **Burger placement (Tue/Thu) and specific soup/salad day-assignments** beyond the stated rules (KM Monday, Pico Thursday, texture Tue/Thu, cold soup on hot day) are improvised for within-day balance and cuisine variety — no governing pattern dictates them.
- **Small-sample caveat (from `PATTERNS.md`).** The 47 analyzed weeks are non-contiguous with large gaps, weather is noted on only 36/47 weeks, and there is no August-2026 data; the warm-season behaviors lean on chef-stated rules plus a handful of May–Aug 2025/2026 weeks. Treat this mock as a plausible hypothesis, not a prediction.

Week of Mock — August heatwave week (Montreal)

GENERATED MOCK — not a real chef menu. source: generated , status: mock . A fictional "what-if" week drawn from the Parsley repertoire and shaped by data/menus/PATTERNS.md (generated 2026-07-24). Scenario given: "August in Montreal, Canada — use typical weather"; the heatwave spell and per-day temperatures are invented but realistic for a Montreal August.

Weekly production

- **Végé:** Ratatouille · Veggie paella · Vegan poutine (*staple*) · Falafels
- **Poisson:** Salmon pesto artichoke (*staple*) · Sesame ginger salmon · Dill gravlax salmon over potato & fennel salad
- **Texture (végé-chicken):** Veggie jerk chicken with orange rémoulade · Veggie chicken satay with almonds
- **Soupe:** Korean soup (*staple*) · Green tom yum soup · Vegan pho soup · Mole verde soup
- **Potage:** Cold melonccio soup (*chilled*) · Cream of tomato soup · Parsnip pear pecan soup · Green summer potage
- **Salades:** Kale mango cabbage salad (*staple*) · Creamy broccoli salad (*staple*) · Orange fennel salad · Asian cabbage salad · Cabbage pepper salad with mint · Bandhu salad · Crunchy cabbage salad
- **Salade-comp:** Chickpea crumble salad · Korean grilled sweet potato salad · Black-eyed pea salad · Cassava tabbouleh salad
- **Sauces:** Satay sauce
- **Hummus:** Broccoli pistachio hummus · Green lime hummus
- **Quiche:** Ham & vegetable quiche (*Ham staple*)
- **Sandwichs:** Cajun salmon sandwich · Tropical veggie chicken sandwich
- **Wraps:** Tuna salad wrap
- **Burgers:** Veggie chicken burger · Veggie beef burger
- **Pico de Gallo:** Pico de gallo

Weekly schedule

Day	Temp	Weather	Dishes
Mon 10 Aug	30 °C	hot & humid	Kale mango cabbage salad · Creamy broccoli salad · Orange fennel salad · Korean soup · Cream of tomato soup · Salmon pesto artichoke · Ratatouille · Vegan poutine · Broccoli pistachio hummus · Cajun salmon sandwich · Veggie chicken burger
Tue 11 Aug	32 °C	hot	Asian cabbage salad · Cabbage pepper salad with mint · Green tom yum soup · Green summer potage · Sesame ginger salmon · Veggie jerk chicken with orange rémoulade · Green lime hummus · Veggie beef burger · Falafels
Wed 12 Aug	33 °C	very hot & humid	Cold melonccio soup · Vegan pho soup · Bandhu salad · Crunchy cabbage salad · Dill gravlax salmon over potato & fennel salad · Chickpea crumble salad · Broccoli pistachio hummus · Veggie paella
Thu 13 Aug	31 °C	hot	Pico de gallo · Creamy broccoli salad · Korean grilled sweet potato salad · Mole verde soup · Parsnip pear pecan soup · Salmon pesto artichoke · Veggie chicken satay with almonds · Tuna salad wrap · Veggie chicken burger · Vegan poutine
Fri 14 Aug	29 °C	hot	Crunchy cabbage salad · Black-eyed pea salad · Cassava tabbouleh salad · Green tom yum soup · Green summer potage · Sesame ginger salmon · Ham & vegetable quiche · Tropical veggie chicken sandwich · Satay sauce · Veggie beef burger

Comments and weather

Mock heatwave week (Montreal, August). The whole week is tilted to the salad/cold end; burgers and falafels are emphasized across the hot days; one chilled cold soup (Mélonccio) sits on the 33 °C peak (Wed). No holiday/closure this week.

Why this menu

Strategy

The scenario gives "August in Montreal — typical weather" and this batch slot makes it a **heatwave** week (a hot, humid spell, entirely realistic for a Montreal August). The governing signal is the chef-stated **hot-weather → lighter menu** pattern: salads, cold soups and fresh dishes sell, while hearty ragoûts/curries/cooked-veg-plus-starch get hard to move (*weather_temp, chef-stated, high*). So the week is deliberately pushed toward the salad/cold end: **salades at the top of their range (7** vs a median of 6), plant/fish mains kept light, and the hearty **végé** category held at its **minimum (4)** — and even those four skew summery (ratatouille, paella) rather than winter stews. Burgers sit at the **top of their warm-season range (2)** and falafels are added, because both cluster in the 20–33 °C weeks (*weather_temp / menu_skeleton, medium–high*). Every day still fields ≥ 1 soup, ≥ 1 salad and ≥ 1 fish main per the per-day balance rules.

Per-day notes

- **Monday, 30 °C** — Opens with the **Kale mango cabbage** staple (KM → Monday rule) plus two more cold salads, a light Korean broth and a cream of tomato potage, salmon pesto artichoke as the fish main, and a burger. No texture main (those are held for Tue/Thu) and **no Pico** (never made on Monday).
- **Tuesday, 32 °C** — First **texture main** of the week (jerk veggie-chicken), spaced for Thursday's second. Two fresh salads (including a minty cabbage salad), a light green tom yum broth, a burger **and falafels** — the hot-day burger/falafel cluster.

- **Wednesday, 33 °C (peak)** — The hottest, most salad-lean day. The one **chilled Mélonccio cold soup** of the week goes here (cold soups belong on days ≥ 24 °C; Mélonccio runs $\leq$ once/week — this is its single placement). The fish main is **cold** too (dill gravlax over potato-fennel salad). No texture main (a third texture dish only appears Wednesday under high demand — not modelled here) and no burger — the day leans coldest.
- **Thursday, 31 °C** — **Pico de Gallo** (Thursday rule; warm-season dish, ideal in heat). Second **texture main** (satay veggie-chicken), a wrap, a burger, and a lighter mole verde soup.
- **Friday, 29 °C** — Composed bean/tabbouleh salads, tom yum, the **Ham quiche** staple, a veggie-chicken sandwich, the week's **sauce** (Satay sauce), and a burger to close the hot week.

Pattern citations (with confidence)

- **Skeleton counts** — salades 7 (upper range), potage/soupe 4 each, végé 4 (min), poisson 3, salade-comp 4, hummus 2, texture 2, sandwichs 2, sauces 1, quiche 1, wraps 1, burgers 2. (*menu_skeleton, high; burgers medium/warm-season*)
- **Staples mapped to Parsley** — Ham (`ham-and-vegetable-quiche`), Poutine (`vegan-poutine-medium`), Kale mango cabbage (`kale-mango-cabbage-salad`), Salmon pesto artichoke (`salmon-pesto-artichoke`), Korean (`korean-soup`), Creamy broccoli (`creamy-broccoli-salad`). (*rotation, high*)
- **Kale mango cabbage** → **Monday**. (*per_day_balance, chef-stated, high*)
- **Pico de Gallo** → **Thursday, never Monday**. (*per_day_balance, chef-stated, high; and calendar: warm-season only, medium*)
- **Texture mains** → **Tuesday + Thursday, spaced**. (*per_day_balance, chef-stated, high*)
- **Hot week** → **salad/cold lean; burgers + falafels cluster on hot days**. (*weather_temp, chef-stated + corroborated, high*)
- **Chilled cold soup (Mélonccio) only on a ≥ 24 °C day, $\leq$ once/week** — placed on the 33 °C Wednesday. (*weather_temp, chef-stated, high*)
- **≥ 1 soup, ≥ 1 salad, ≥ 1 fish main each day**. (*per_day_balance, high for soup/salad, high for fish*)

Improvisation & honesty flags

- **Small-sample caveat (from PATTERNS.md)**. The 47 analyzed weeks are non-contiguous, temperature is noted on only 95/188 service days, and **nearly all dish tags are inferred** — so protein/format counts carry inference error. This mock is a plausibility exercise, not a validated chef plan. Also note there is a real August 2025 window (2025-08-11 ..) in the corpus but its per-day weather is thin, so the heatwave detail here is invented, not observed.
- **All dish tags in the `dishes: block` are `tag_source: inferred`** from the recipe name + repertoire knowledge, not copied from tagged recipe files. Treat temperature/weather/spice/diet as approximate — e.g. Creamy broccoli's dairy content and the exact spice level of Korean soup / tom yum are guesses.
- **"Green summer potage" has no matching Parsley recipe** — set `recipe_source: none` with a blank `recipe_id` (never invented a slug). It is included only on the chef's stated surplus/fridge exception for *Potage Vert L'été*, and is a low-confidence, improvised inclusion.
- **"Korean" staple resolved to `korean-soup`** (a soupe). The name is ambiguous in the rotation — it could instead be the Korean sweet-potato salad or the Korean poke bowl; this is an inference. (The distinct `korean-grilled-sweet-potato-salad` also appears as a composed salad on Thu — a different dish, not a duplicate.)

- **Parsnip-pear-pecan potage is a stretch in a heatwave** (it reads more autumnal). It is here mainly to honor the potage **minimum of 4** and offer one non-cold soup option; in a real hot week the chef might drop it. Flagged as a low-confidence, improvised choice.
- **Vegan poutine (staple, 47/47) is heavy for extreme heat** — the 2026-05-18 note even has "Poutine stalling." It is kept because it is an every-week staple, but placed on only two days (Mon, Thu) and never on the 33 °C peak. Improvised trade-off between the staple rule and the heat-lean rule.
- **Burger diet tags** left at `[vegetarian]` (not vegan) as a conservative guess; the veggie-chicken/beef patty binders and buns weren't checked against the recipe files.

Week of Mock — late-summer back-to-school week (Montreal)

MOCK MENU — generated, not a real chef menu. source: generated , status: mock . A fictional "what-if" week drawn from the Parsley repertoire and shaped by data/menus/PATTERNS.md (generated 2026-07-24). All dish tags are **inferred** from names + INDEX ingredients, not copied from tagged recipes.

Weekly production

Végé (4): Vegan poutine (medium) · Ratatouille · Vegetable lasagna (gluten-free) · Veggie paella **Poisson (3):** Salmon pesto artichoke · Salmon crumble · Mediterranean-style haddock **Texture (2):** Korean veggie-chicken poké bowl · Veggie jerk chicken with orange rémoulade **Soupe (5):** Spanish soup · Green tom yum soup · Chipotle lentil vegetable soup · Fisherman's chowder · Tulum soup **Potage (5):** Cream of tomato soup · Parsnip pear pecan soup · Rutabaga apple maple soup · Mushroom tarragon soup · Cold Mélonccio soup **Sandwichs (2):** Satay veggie-chicken banh mi sandwich · Blackened haddock sandwich **Wraps (1):** Tuna salad wrap **Salades (6):** Kale mango cabbage salad · Asian cabbage salad · Orange fennel salad · Cabbage pepper salad with mint · Beet hazelnut salad · Crunchy cabbage salad **Salade composée (3):** Creamy broccoli salad · Provençal salad · Chickpea crumble salad **Sauces (1):** Satay sauce **Hummus (2):** Dill hummus · Broccoli and pistachio hummus **Quiche (1):** Ham and vegetable quiche **Burgers (1):** Veggie beef burger **Pico de gallo (1):** Pico de gallo

Weekly schedule

Day	Temp	Weather	Dishes
Mon 31 Aug	27 °C	sunny	Kale mango cabbage salad · Beet hazelnut salad · Creamy broccoli salad · Cream of tomato soup · Spanish soup · Salmon pesto artichoke · Vegan poutine (medium) · Dill hummus · Ham and vegetable quiche
Tue 1 Sep	26 °C	sunny	Asian cabbage salad · Orange fennel salad · Provençal salad · Parsnip pear pecan soup · Green tom yum soup · Salmon crumble · Korean veggie-chicken poké bowl · Broccoli and pistachio hummus · Veggie beef burger · Satay sauce
Wed 2 Sep	29 °C	hot, humid	Cabbage pepper salad with mint · Crunchy cabbage salad · Chickpea crumble salad · Cold Mélonccio soup · Tulum soup · Mediterranean-style haddock · Ratatouille · Satay veggie-chicken banh mi sandwich · Tuna salad wrap
Thu 3 Sep	24 °C	afternoon thunderstorm	Beet hazelnut salad · Asian cabbage salad · Creamy broccoli salad · Mushroom tarragon soup · Chipotle lentil vegetable soup · Salmon pesto artichoke · Veggie jerk chicken with orange rémoulade · Pico de gallo · Blackened haddock sandwich · Broccoli and pistachio hummus
Fri 4 Sep	23 °C	cooler, clearing	Crunchy cabbage salad · Orange fennel salad · Provençal salad · Rutabaga apple maple soup · Fisherman's chowder · Salmon crumble · Vegetable lasagna (gluten-free) · Veggie paella · Dill hummus

Comments and weather

Mock late-summer / back-to-school week for Montreal: a warm sunny start, a hot humid Wednesday, an afternoon thunderstorm Thursday, and a cooler clearing Friday. The one cold soup sits on the hottest day; hearty plates and soups are weighted toward the cooler tail.

Why this menu

Strategy

The given constraint was only "August in Montreal, Canada — use typical weather"; everything else (per-day temps, weather, the event) is invented and recorded in `scenario.invented`. Late-August Montreal typically runs warm-to-hot with humid spells and convective afternoon storms, so I set a warm sunny Mon–Tue, a hot humid Wed (29 °C), a 24 °C Thursday broken by an afternoon thunderstorm, and a cooler 23 °C clearing Friday. The week is built salad-forward on the hot front half (**hot summer** → **lighter menu**, `weather_temp`, high/stated) and tilts toward hearty soups and plates on the cooler Thursday/Friday tail (**cool weather** → **soups + hearty + salads all sell**, `weather_temp`, medium/stated). The invented **back-to-school event** is treated only as a soft narrative flag (see honesty flags): it is a *demand-volume* theme captured in PATTERNS but explicitly **not modeled** as a placement rule, so it shapes the story, not the dish grid.

Category counts follow the `menu_skeleton` medians exactly (high confidence): salades 6, potage 5, soupe 5, v  g   4, poisson 3, salade-comp 3, hummus 2, texture 2, sandwichs 2, sauces 1, quiche 1, wraps 1, burgers 1 (plus a warm-season pico). All six staples appear: **Ham** (as the ham & vegetable quiche), **Poutine**, **Kale mango cabbage**, **Salmon pesto artichoke**, **Korean** (as the veggie-chicken pok   bowl, used as a texture main), and **Creamy broccoli**.

Per-day notes

- **Mon 27 °C sunny** — warm, salad-forward opener. **Kale mango cabbage is placed on Monday** (`per_day_balance`, chef-stated). Soup + potage in parallel (Spanish soup + cream of tomato), a salad slate, salmon pesto artichoke as the fish main, poutine as the plant/veg main, and the ham quiche. No texture main and no pico (both belong later in the week).
- **Tue 26 °C sunny** — the **first texture main** of the Tue/Thu pair: the Korean veggie-chicken pok   bowl (`per_day_balance`, chef-stated). Still warm, so the veggie beef burger runs (**burgers cluster on hot days**, `weather_temp / calendar`). Salmon crumble is the fish; green tom yum + parsnip potage cover the soups.
- **Wed 29 °C hot, humid** — the hottest day, so the **cold M  lonccio soup** is placed here and **only here** (chef rule: cold soups only on days ≥ 24 °C, $\leq$ once/week, hottest summer only). Salad-lean composition, a lighter haddock fish main, ratatouille as the veg main, plus a banh mi and a tuna wrap for cold handhelds.
- **Thu 24 °C afternoon thunderstorm** — the **second texture main**, veggie jerk chicken, spaced a day from Tuesday (`per_day_balance`, chef-stated). **Pico de gallo is placed on Thursday** and never on Monday (`per_day_balance`, chef-stated). At 24 °C a cold soup would technically be eligible, but it was already used once on Wednesday, so Thursday leans to hot soups (mushroom tarragon + chipotle lentil) as the storm rolls in. The *day of* a storm tends to keep clients home (demand-volume theme, captured-not-modeled) — noted narratively only.
- **Fri 23 °C cooler, clearing** — 23 °C is **below the 24 °C cold-soup threshold**, so **no cold soup Friday**. Cooler weather broadens demand, so the day pushes hearty: fisherman's chowder + rutabaga-apple-maple potage, salmon crumble, and two warm plates (GF vegetable lasagna, veggie paella).

Pattern citations (with confidence)

- **Skeleton counts = medians** — `menu_skeleton`, **high** (inferred). Every category set to its median within min/max.
- **KM → Monday** — `per_day_balance`, **high, chef-stated**.
- **Pico de gallo → Thursday, never Monday** — `per_day_balance`, **high, chef-stated**; and pico is a **warm-season** dish (`calendar`, medium) — late August qualifies.
- **Texture mains → Tuesday + Thursday, spaced** — `per_day_balance`, **high, chef-stated**. No third (Wednesday) texture main, since that only appears under high demand.
- **Cold soup only on days ≥ 24 °C, $\leq$ once/week, hottest summer** — `weather_temp`, **high, chef-stated** (this supersedes the older inferred "cool/rainy → cold soup" rule). Placed on the 29 °C Wednesday; kept off the 23 °C Friday.
- **Hot summer → lighter/salad-forward menu; burgers/pico cluster on hot days** — `weather_temp`, **high, chef-stated**, corroborated in warm-month weeks.
- **Cool weather → soups + hearty + salads all sell** — `weather_temp`, **medium, chef-stated**. Drives the hearty Thu/Fri tail.
- **≥ 1 soup and ≥ 1 salad every day; a fish main most days; a plant/texture main most days** — `per_day_balance`, **high** (soup/salad/fish) and **medium** (texture), inferred. Each service day here fields ≥ 2 soups, multiple salads, ≥ 1 fish main, and a plant/veg/texture main.
- **Staple anchoring** (Ham, Poutine, KM, Salmon pesto artichoke, Korean, Creamy broccoli) — `rotation`, **high**, inferred.

Improvisation & honesty flags (+ small-sample caveat)

- **Every dish tag is inferred**, read from the dish name and the Parsley INDEX ingredient counts — not copied from a verified tagged recipe. Protein/temperature/ richness/cuisine/diet values (and especially diet flags like vegan vs. vegetarian, or gluten-free) may be wrong for any given dish. In particular I inferred: *cream of tomato* and *mushroom tarragon* as **dairy-containing** (vegetarian, not vegan); *creamy broccoli* and *GF lasagna* as vegetarian; the *veggie beef burger* as vegetarian (it may be vegan). Verify against the recipe files before real use.
- **Staple → dish mapping is a judgment call**. The rotation staple "**Korean**" is ambiguous (there is a Korean soup, a Korean grilled-sweet-potato salad, and a Korean-sauce veggie-chicken poké bowl). I mapped it to the **poké bowl** so it could serve as one of the two texture mains; if the chef's "Korean" is actually the soup, the texture slot would need a different dish (e.g. Thai or satay veggie chicken).
- **"Ham" as a quiche** — the staple "Ham" was mapped to `ham-and-vegetable-quiche` (the only ham-forward repertoire item); the real menu "Ham" could be a different format. Judgment call, flagged.
- **Back-to-school event is narrative only**. PATTERNS records back-to-school under **demand-volume themes that are captured, NOT modeled** (no volume dimension exists yet), so it does not move any dish onto a specific day here — it only colors the rationale. Likewise the "day before a storm buy more / day of stay home" theme is mentioned but not used to change placement.
- **Cross-day repeats** (e.g. salmon pesto artichoke on Mon + Thu, beet hazelnut salad on Mon + Thu) reflect normal multi-day production and are an authoring choice, not a pattern rule.
- **Mélonccio at exactly 24 °C on Thursday was deliberately avoided** to respect the " $\leq$ once/week" clause even though 24 °C is technically eligible — a conservative read.
- **Small-sample caveat (from PATTERNS.md)**: the 47 analyzed weeks are non-contiguous with large gaps, weather/temp is noted on only 36/47 weeks, autumn is mostly bare, and nearly all dish tags in the corpus are themselves inferred. Treat `low` / `speculative` rows as hypotheses; the `stated` rules leaned on

here (KM→Mon, Pico→Thu, texture Tue/Thu, cold-soup ≥ 24 °C, hot→lighter) are the highest-confidence signals available and carried the most weight in this mock.

Week of Mock — stormy mixed August week (Montreal)

MOCK / GENERATED — a fictional "what-if" week built by the `menus-recommend` skill from `PATTERNS.md` (generated 2026-07-24) + the Parsley repertoire. This is an exploration artifact, **not a real chef menu**. Mock dates 17–21 August.

Weekly production

Pool by category, filled to the `PATTERNS.md` skeleton medians.

Végé (4): Vegan poutine (medium) · Ratatouille · Veggie paella · Gluten-free vegetable lasagna **Poisson (3):** Salmon pesto artichoke · Salmon crumble · Mediterranean-style haddock **Texture / végété-chicken (2):** Veggie jerk chicken with orange remoulade · Veggie Thai chicken **Soupe (5):** Korean soup · Chipotle lentil vegetable soup · Fisherman's chowder · Green tom yum soup · Spanish soup **Potage (5):** Cold Mèlonccio soup · Cream of tomato soup · Mushroom tarragon soup · Parsnip pear pecan soup · Rutabaga apple maple soup **Salades (6):** Kale mango cabbage salad (KM) · Creamy broccoli salad · Provençal salad · Bandhu salad · Orange fennel salad · Vegan Greek salad **Salade-comp (3):** Chickpea crumble salad · Carrot celeriac and almond salad · Cassava tabbouleh salad **Sandwichs (2):** Cajun salmon sandwich · Satay veggie chicken banh mi sandwich **Wraps (1):** Tuna salad wrap **Sauces (1):** Satay sauce **Hummus (2):** Dill hummus · Broccoli pistachio hummus **Quiche (1):** Ham and vegetable quiche **Burgers (1):** Veggie chicken burger **Pico de Gallo (1):** Pico de Gallo

Weekly schedule

Day	Temp	Weather	Dishes
Mon 17	26 °C	sunny	Kale mango cabbage salad (KM); Creamy broccoli salad; Orange fennel salad; Cream of tomato soup; Green tom yum soup; Salmon pesto artichoke; Vegan poutine; Ratatouille; Dill hummus; Ham and vegetable quiche; Cajun salmon sandwich
Tue 18	22 °C	cloudy, thunderstorms	Provençal salad; Bandhu salad; Korean soup; Chipotle lentil vegetable soup; Mushroom tarragon soup; Salmon crumble; Gluten-free vegetable lasagna; Veggie jerk chicken with orange remoulade (texture); Broccoli pistachio hummus; Satay sauce; Tuna salad wrap
Wed 19	21 °C	rainy	Creamy broccoli salad; Carrot celeriac and almond salad; Parsnip pear pecan soup; Rutabaga apple maple soup; Fisherman's chowder; Spanish soup; Mediterranean-style haddock; Veggie paella; Dill hummus; Satay veggie chicken banh mi sandwich
Thu 20	27 °C	humid, sunny	Vegan Greek salad; Orange fennel salad; Cold Mèlonccio soup (cold, ≥24 °C only); Green tom yum soup; Salmon pesto artichoke; Vegan poutine; Ratatouille; Veggie Thai chicken (texture); Pico de Gallo ; Broccoli pistachio hummus; Cajun salmon sandwich
Fri 21	25 °C	partly cloudy	Bandhu salad; Vegan Greek salad; Chickpea crumble salad; Cassava tabbouleh salad; Cream of tomato soup; Korean soup; Salmon crumble; Veggie paella; Veggie chicken burger; Dill hummus; Satay veggie chicken banh mi sandwich

Comments and weather

MOCK week — a Montreal August unstable/thunderstorm week (Week 3 of 5): warm sunny days (Mon 26 °C, Thu 27 °C, Fri 25 °C) interrupted by a cool stormy Tue (22 °C) and a rainy Wed (21 °C). The week is built to **test the cold-soup direction rule**: the chilled Cold Mélonccio soup appears ONLY on the hottest day (Thu, 27 °C), while the cool stormy Tue/Wed lean on hot, hearty soups.

Why this menu

Strategy

The scenario is a classic Montreal August: a run of warm-to-hot sunny days broken by a two-day thunderstorm/rain trough mid-week. The whole week is a light, salad-forward summer menu (six salads + three composed salads, burgers and Pico in play as warm-season items) — but the temperature *swing* is the real design driver. The two cool days (Tue 22 °C, Wed 21 °C) are treated as demand-*broadening*, not demand-narrowing: hot hearty soups lead, hearty mains (lasagna, paella) come out, and salads still run. The three hot days (Mon/Thu/Fri, all ≥ 25 °C) go salad-lean, and the single chilled cold soup is reserved for the hottest of them. The six rotation staples all appear — Ham (as the quiche), Poutine, Kale mango cabbage, Salmon pesto artichoke, Korean (soup), and Creamy broccoli (salad).

Per-day notes

- **Monday (26 °C, sunny)** — Warm sunny open. Kale mango cabbage (KM) anchors Monday per the chef's placement rule; Poutine and the Ham quiche fill the Monday "full-fridge" role. Soup slot is a smooth potage (cream of tomato) plus a light brothy tom yum — warm but not hot enough to justify the cold soup, which is held back for Thursday. Pico de Gallo is deliberately absent (never on Monday).
- **Tuesday (22 °C, cloudy, thunderstorms)** — Cool storm day. Soups go hot and hearty (Korean, chipotle lentil, mushroom tarragon); no cold soup at 22 °C. First texture main of the week (veggie jerk chicken). Note the storm demand pattern: the day *of* a storm, clients tend to stay home, so this is a lean-into-hot-comfort day rather than a volume day.
- **Wednesday (21 °C, rainy)** — Coolest day. Hearty hot soups lead, headlined by Fisherman's chowder (the chef's own note records chowder selling well in storm weather). No cold soup at 21 °C. No texture main — texture mains are spaced Tue/Thu, so Wednesday skips it.
- **Thursday (27 °C, humid, sunny)** — The hot pivot and **the** cold-soup day: Cold Mélonccio soup runs here and only here. Salad-lean and fresh (Greek, orange fennel), second texture main (veggie Thai chicken, spaced from Tuesday), and Pico de Gallo on its Thursday slot.
- **Friday (25 °C, partly cloudy)** — Warm enough (≥ 24 °C) that a cold soup would be *eligible*, but Mélonccio runs at most once a week and already ran Thursday, so the soup slot is a light hot potage instead. Salad-lean with a warm-season veggie burger.

Pattern citations (with confidence)

- **Skeleton counts** set to PATTERNS medians — salades 6, potage 5, soupe 5, vege 4, poisson 3, salade-comp 3, hummus 2, texture 2, sandwiches 2, sauces 1, quiche 1, wraps 1, burgers 1. (*menu_skeleton* — high; inferred)
- **All six staples present** — Ham, Poutine, KM, Salmon pesto artichoke, Korean, Creamy broccoli. (*rotation staples* — high; inferred)
- **KM → Monday**. (*per_day_balance* — chef-stated, high)

- **Pico de Gallo → Thursday, never Monday.** (*per_day_balance — chef-stated, high; also warm-season — calendar, medium*)
- **Texture mains → Tuesday + Thursday, spaced a day apart** (jerk Tue, Thai Thu), none on Wednesday. (*per_day_balance — chef-stated, high*)
- **Cold soup (Mélonccio) only on days ≥ 24 °C** → placed on Thu (27 °C), kept off Tue (22 °C) and Wed (21 °C); $\leq$ once/week, so also kept off the eligible Fri (25 °C). (*weather_temp — chef-stated, high; this rule **supersedes** the older inferred "cool/rainy → cold soup," which is explicitly retired in PATTERNS.*)
- **Cool days broaden demand → hot hearty soups + hearty mains + salads all run** on Tue/Wed. (*weather_temp — chef-stated, medium*)
- **Hot days → lighter, salad-forward menu; burgers/Pico cluster in warm weeks.** (*weather_temp — chef-stated, high; calendar Pico warm-season — medium*)
- **≥ 1 soup and ≥ 1 salad every service day; a fish main most days; plant main most days.** Each day here carries multiple soups + salads, at least one fish main, and a plant/texture main. (*per_day_balance — high/medium; inferred*)
- **Chowder in storm weather** (Wed) echoes the chef's 2025-02-10 note that chaudière "sold well" during a snow storm. (*stated_intent — high as a quote; generalization low.*)

Improvisation & honesty flags

- **All dish tags are **inferred****, read from each dish's name + Parsley ingredients, not copied from a tagged recipe. Protein/temperature/weather/spice values carry inference error — e.g. Korean soup's `spice_level: medium` and Fisherman's chowder's `protein: fish` / `richness: rich` are best-guesses from the name.
- **Every **recipe_id** was verified** against `data/parsley/recipes-en/` (exact filename minus `.md`); all 37 dishes matched, so `recipe_source: parsley` throughout and no blanks were needed.
- **Potage vs. soupe split is partly improvised.** PATTERNS tracks the two as separate pool categories but does not define the boundary; I assigned creamy/pureed items to potage and brothy/chunky/hearty items to soupe by inference.
- **Rutabaga apple maple + parsnip pear pecan soups on Wednesday** lean autumnal for mid-August; I used them as generic hearty hot potages for the cool rainy day. If the chef reads these as fall-only, swap for other hearty hot soups. (*improvised — no governing seasonal pattern for these two specific soups.*)
- **Per-day dish counts are improvised.** PATTERNS gives per-week skeleton medians and within-day *composition* rules, but no per-day count target, so the ~10–11 dishes/day distribution is my own balancing, not a chef rule.
- **Weekday/holiday calendar:** no statutory Monday holiday falls in this mock August window, so no closure was applied; the occasional-summer-Tuesday-closure pattern is `low`-confidence and was not invoked.
- **Small-sample caveat (from PATTERNS.md):** the 47 analyzed weeks are non-contiguous with large gaps, weather/temp is noted on only a minority of service days, and nearly all dish tags are inferred. Treat `low` / `speculative` rows as hypotheses; the chef-`stated` rules (KM→Mon, Pico→Thu, texture Tue/Thu, cold-soup ≥ 24 °C) are the spine this mock leans on hardest.

Week of Mock — cool rainy late-August week (Montreal)

MOCK / GENERATED — a fictional "what-if" week from the `menus-recommend` skill. Not a real chef menu. Dishes are drawn from the Parsley repertoire and shaped by `data/menus/PATTERNS.md` (generated 2026-07-24). Tags are **inferred**.

Weekly production

Salades (6): Kale mango cabbage · Creamy broccoli · Bandhu · Carrot celeriac almond · Asian cabbage · Beet hazelnut **Salades composées (3):** Provençal · Chickpea crumble · Cassava tabbouleh **Potages (5) — hot line unless noted:** Cream of tomato · Parsnip pear pecan · Rutabaga apple maple · Mushroom tarragon · *Potage Vert L'été (chilled — prêt-à-manger fridge, surplus exception)* **Soupes (6) — all served hot:** Korean · Green tom yum · Chipotle lentil vegetable · Mole verde · Spanish · Vegan pho **Végé mains (5):** Vegan poutine (*staple*) · Ratatouille · Veggie paella · Gluten-free vegetable lasagna · Veggie moussaka **Poisson (3):** Salmon pesto artichoke (*staple*) · Salt cod curry · Salmon crumble **Texture / végé-chicken (2):** Veggie jerk chicken w/ orange remoulade · Veggie thai chicken **Hummus (2):** Broccoli & pistachio · Dill **Sandwichs (2):** Blackened haddock · Tropical veggie chicken **Wraps (1):** Tuna salad **Sauces (1):** Satay sauce **Quiche (1):** Ham & vegetable (*the "Ham" staple*) **Burgers (1):** Veggie chicken burger (*warm-season tail*)

Weekly schedule

Day	Temp	Weather	Featured dishes
Mon 24 Aug	20°C	cloudy	KM salad, creamy broccoli · Cream of tomato (hot), Korean soup · Salmon pesto artichoke · Ratatouille · Poutine, Ham quiche, broccoli-pistachio hummus
Tue 25 Aug	19°C	rainy	Bandhu, Provençal · Rutabaga-apple-maple (hot), Green tom yum · Salt cod curry · Jerk chicken (texture) , GF veg lasagna · Poutine, dill hummus, blackened haddock sandwich
Wed 26 Aug	22°C	overcast	Asian cabbage, carrot-celeriac · Mushroom tarragon (hot), Spanish soup · Salmon crumble · Veggie paella · Poutine, veggie chicken burger , tuna wrap · <i>Potage Vert L'été (chilled fridge exception)</i>
Thu 27 Aug	21°C	cloudy	Beet hazelnut, cassava tabbouleh · Parsnip-pear-pecan (hot), Mole verde · Salmon pesto artichoke · Thai chicken (texture) , veggie moussaka · Poutine, Ham quiche, tropical veggie-chicken sandwich, satay sauce
Fri 28 Aug	18°C	cool, rainy	Chickpea crumble, creamy broccoli · Chipotle lentil veg (hot), Vegan pho, Parsnip-pear-pecan · Salt cod curry · Ratatouille · Poutine, dill hummus, tuna wrap

Each service day fields ≥ 1 soup, ≥ 1 salad, ≥ 1 fish main, and a plant main (per `per_day_balance`, all `high / stated`). Texture mains are spaced Tue + Thu.

Comments and weather

Mock cool, rainy late-August week (Montreal), 18–22°C — **no day reaches 24°C**. The week leans hot/hearty (soupes and hearty végé mains above their medians) while keeping the full six-salad spine. **All soups are served hot**. The single cold-soup-family item, *Potage Vert L'été*, is a surplus-driven chilled item for the prêt-

à-manger fridge — never on the hot line. No chilled cold soup (Mélonccio) this week; no Chili d'Orge (Oct–April only). Pico de Gallo dropped for the cool spell.

Why this menu

Strategy

The brief is a cool, rainy late-August week in Montreal — an early hint of fall, a genuine local pattern — with every day between 18°C and 22°C and **none at or above 24°C**. Per `weather_temp`, cool weather **broadens** demand rather than narrowing it: soups sell well, hearty dishes sell again, and salads still sell (chef-stated, medium). So the week keeps the full salad spine at its median (6 salades + 3 composées) but pushes the hot/hearty end **above** median — 6 soupes (median 5) and 5 végé mains (median 4) — with hearty stews, curries, casseroles, and root/cream potages doing the heavy lifting on the wettest days. The staple spine (Ham, Poutine, KM, Salmon pesto artichoke, Korean, Creamy broccoli) anchors every week and is all present.

Per-day notes

- **Mon 20°C cloudy** — KM salad opens the week (chef rule: KM → Monday). Hot Cream-of-tomato potage + Korean soup; salmon pesto artichoke and ratatouille as the fish/plant mains. No Pico (never made Monday).
- **Tue 19°C rainy** — cold rain → the hearty push: rutabaga-apple-maple potage and green tom yum, salt cod curry, GF veg lasagna. First spaced texture main (jerk chicken).
- **Wed 22°C overcast** — the mildest, driest day, so the lone warm-season burger sits here. Salmon crumble + veggie paella. This is where the flagged cold-family exception lives (below).
- **Thu 21°C cloudy** — second spaced texture main (thai chicken) + veggie moussaka; mole verde + parsnip-pear-pecan potage; satay sauce over pasta/poutine. Pico *would* be a Thursday item but is dropped (see honesty flags).
- **Fri 18°C cool, rainy** — the coldest, wettest day gets the heaviest hot soups and a warming stew/curry: chipotle lentil vegetable soup, vegan pho, salt cod curry, ratatouille.

The "no cold soup below 24°C" reasoning (explicit)

`weather_temp` carries a **high-confidence, chef-stated** rule that *supersedes* the older inferred "cool/rainy → cold soups": **cold-served cold soups appear only on days ≥ 24°C** — a cold soup suits hot weather, not cold. **No day this week reaches 24°C** (max 22°C Wed), so **no chilled cold soup is scheduled at all**. Concretely, *Potage Froid Mélonccio* (`cold-melonccio-soup`) is **excluded** — it runs only in the hottest part of summer, ≤ once a week — and every soupe/potage on the hot line is served hot.

The **only** cold-soup-family item on the sheet is *Potage Vert L'été*, placed on Wednesday and flagged as the stated exception: it may appear **any season on a broccoli/zucchini surplus** and goes to the **prêt-à-manger fridge, not the hot line**. It is included here as a surplus-utilisation item (the week is broccoli/ zucchini-heavy via creamy broccoli, broccoli hummus, and pesto/ratatouille prep), NOT as a weather-driven cold soup — which is exactly the distinction the rule draws. Had there been no surplus rationale, it would have been dropped too.

Pattern citations (with confidence)

- **Skeleton counts** from `menu_skeleton` medians, bounded by min/max — salades 6, potage 5, soupe 5→**6**, végé 4→**5**, poisson 3, salade-comp 3, hummus 2, texture 2, sandwichs 2, sauces 1, quiche 1, wraps 1, burgers 1. (*high; inferred*)

- **Cool week → soups & hearty mains above median, salads still full** — `weather_temp` "cool weather broadens demand." (*chef-stated; medium*)
- **No chilled cold soup below 24°C; Mélonccio excluded** — `weather_temp` cold-soup rule. (*chef-stated; high*)
- **Potage Vert L'été only as a surplus fridge item** — `weather_temp` stated exception (a). (*chef-stated; high*)
- **KM → Monday** — `per_day_balance`. (*chef-stated; high*)
- **Texture / végété-chicken → Tuesday + Thursday, spaced; no third midweek main under normal demand** — `per_day_balance`. (*chef-stated; high*)
- **Pico de Gallo → Thursday, never Monday; warm-season only** — `per_day_balance`
 - `calendar`. (*chef-stated / medium*) — here honored by placement logic, then dropped (below).
- **Chili d'Orge → Oct–April only, excluded** — `calendar`. (*chef-stated; high*)
- **≥1 soup, ≥1 salad, ≥1 fish main, plant main most days** — `per_day_balance`. (*high / medium; inferred*)
- **Staple spine present** (Ham, Poutine, KM, Salmon pesto artichoke, Korean, Creamy broccoli) — `rotation` staples. (*high; inferred*)

Improvisation & honesty flags

- **Pico de Gallo dropped.** The brief allowed keeping one Thursday pico or dropping it given the cool spell. I dropped it: pico is a fresh, warm-season cold condiment whose demand pattern clusters in 20–33°C weeks; with a sub-24°C, rainy week leaning hot/hearty, it earns its slot less than another hot soup. As its own pool row pico's median is 0 anyway (`menu_skeleton`, low). This is a judgment call, not a hard rule.
- **Burger kept but flagged.** Burgers cluster in **hot** (20–33°C) weeks (`weather_temp / calendar`, corroborated). A cool week slightly disfavors them, but the median is 1 and it is still warm-season August, so I kept a single veggie-chicken burger on the mildest, driest day (Wed 22°C). Low-confidence lean.
- **Potage Vert L'été has no Parsley recipe file** — `recipe_source: none`, `recipe_id` left blank (not invented). Its surplus rationale is plausible but improvised for this mock.
- **Potage vs. soupe split and all dish tags are INFERRED** from names + repertoire knowledge, not from tagged recipe files, so protein/format/richness and the hot-potage classification of items like "Cream of tomato" or "Mushroom tarragon" carry inference error. The `korean-soup / veggie-chicken / ham` recipe mappings for the ambiguous staple names "Korean" and "Ham" are best-guess reads.
- **Weather-per-day values are invented** (the brief gave only "August, typical weather"); the cool-rainy late-August framing is a real Montreal possibility but one scenario among several.
- **Small-sample caveat** (`PATTERNS.md`): the 47 weeks are non-contiguous with a summer gap (nothing 2025-07-14 → 2025-08-11), temperature is noted on only 95/188 service days, and nearly all dish tags are inferred. Treat `low / speculative` rows as hypotheses; the `stated` weather/calendar rules this menu leans on are the trustworthy backbone.
